---

Thanks Roberto. If the situation changes and you would like us to collect some data, just give me a ring. We can do thermal pre incident, monitor for leaks and post incident plume. Aerial images too.

The collection would be at 2800 feet. If FAA has altitude restrictions.

R/Kuda

I don't believe ASPECT can provide any meaningful info at this point since it appears there's no release yet. It is the threat of explosion or fire, then there'll be something to monitor for.

I believe FAA issued a no fly order over the facility until we get better situational info. Info came from Steve at RRCC. Steve??
